

STUDY WORKSHEET - REVIEW UNIT (Vocabulary review: *That's Entertaining!*) Tercero Año Medio

Nam	
	 ,

Objective: Students reinforce the contents from last year, remembering how to apply them through the use of the four English language skills. Students work with reading and visual material to discuss and understand daily situations. Students apply English language knowledge to exercise grammar and vocabulary.

Remembering the content: relative pronouns for people and things, giving opinions

1) Read the following TV series review about Netflix's The Good Place. Then, complete the activities below. Mark the word from the text you don't know and look for their meanings using the space below.

If there's one thing that hit Netflix show The Good Place is absolutely, definitely not about, it's The State of the World Today. Intentionally, anyway. For one thing, this feel-good sitcom isn't even set in our world, but in a non-denominational afterlife you might call "Heaven". This is the Good Place of the title, where Eleanor Shellstrop (Kristen Bell) finds herself in the show's opening episode, where she's supposed to be death. She is amazed by

all the situation of being sent to heaven, but soon concludes she's been sent in error.

The Good Place is for the likes of beautiful philanthropist Tahani (Jameela Jamil), a loving yet irritating woman, the silent Buddhist monk Jianyu (Manny Jacinto), a man who seems to be boring and interested in nothing, and earnest ethics professor Chidi (William Jackson Harper). Eleanor, on the other hand, is the kind of garbage person who reads Celebrity Baby Plastic Surgery Disasters magazine and sells fake medicine to the elderly for a living. Still, understandably, she wants to stay, so spends most of season one trying to keep her secret from Michael (Ted Danson), the smiling angel-architect overseeing the Good Place neighbourhood.

The other point is that The Good Place was midway through its first season on NBC when the 2016 US presidential election took place. Even after the world entered into its Trumpian twilight zone, The Good Place's showrunner, Michael Schur, was keen to ensure his writing team did not get sidetracked: "We talked a lot in the room about, this is not a show about Donald Trump," he told New York magazine before the season two premiere last year. "These characters are dead. These characters don't even know that Donald Trump is president."

4) Look at the following pairs of sentences. Link them using a relative pronoun.

Meryl Streep is an actress. She has won several Osca	Mer	ryl St	reep is	an actr	ess. She	has won	several	Oscar
--	-----	--------	---------	---------	----------	---------	---------	-------

My dad's expensive Ford. It was always in the backyard, but now it's in a museum.

My precious blue lamp. It was in my mom's office.

The man with the red sweater. He was running with a dog yesterday.

Spiderman and Transformers are successful franchises. They were adapted from comic books Stephenie Meyer is an American writer. She wrote the Twilight series.

Many Hollywood stars live in Beverly Hills. It is a small city near Los Angeles, California *Meryl Streep is an actress who has won several Oscars.*

5) Read the following article and look for antonyms of the words in bold. Also, look for the meaning of the phrases in bold.

As Covid-19 has spread, so has our fear of surfaces. There are now some familiar scenes in public places around the world — **people trying to open doors with their elbows**, commuters

studiously surfing their way through train journeys to avoid grabbing a handle, office workers rubbing down their desks each morning.

In the areas worst hit by the new coronavirus, teams of workers in protective clothing have been dispatched to spray a fog of disinfectant in plazas, parks and public streets. Cleaning regimes in offices, hospitals, shops and restaurants have been increased. In some cities, well-meaning volunteers even venture out at night to scrub the keypads of cash machines.

Like many respiratory viruses, including flu, Covid-19 can be spread in tiny **droplets** released from the nose and mouth of an infected person as they cough. A single **cough** can produce up to 3,000 droplets. These **particles can land on other people**, clothing and surfaces around them, but some of the smaller particles can remain in the air. There is also some evidence that the virus is also shed for longer in faecal matter, so anyone not washing their hands thoroughly after visiting the toilet could contaminate anything they touch.
